

GrimoireLab made simple

Using the basic stuff from Python

CHAOSCon NA, Vancouver, Aug 28 2018

chaoss.biterg.io

CHA^{SS}

Installing from pip

```
$ python3 -m venv /tmp/gl
```

```
$ source /tmp/gl/bin/activate
```

```
(gl) $ pip install --upgrade pip setuptools wheel
```

```
(gl) $ pip install grimoirelab
```

```
(gl) $ grimoirelab -v
```

chaoss.github.io/grimoirelab-tutorial/basics/install.html

Running from Docker images

credentials.cfg:

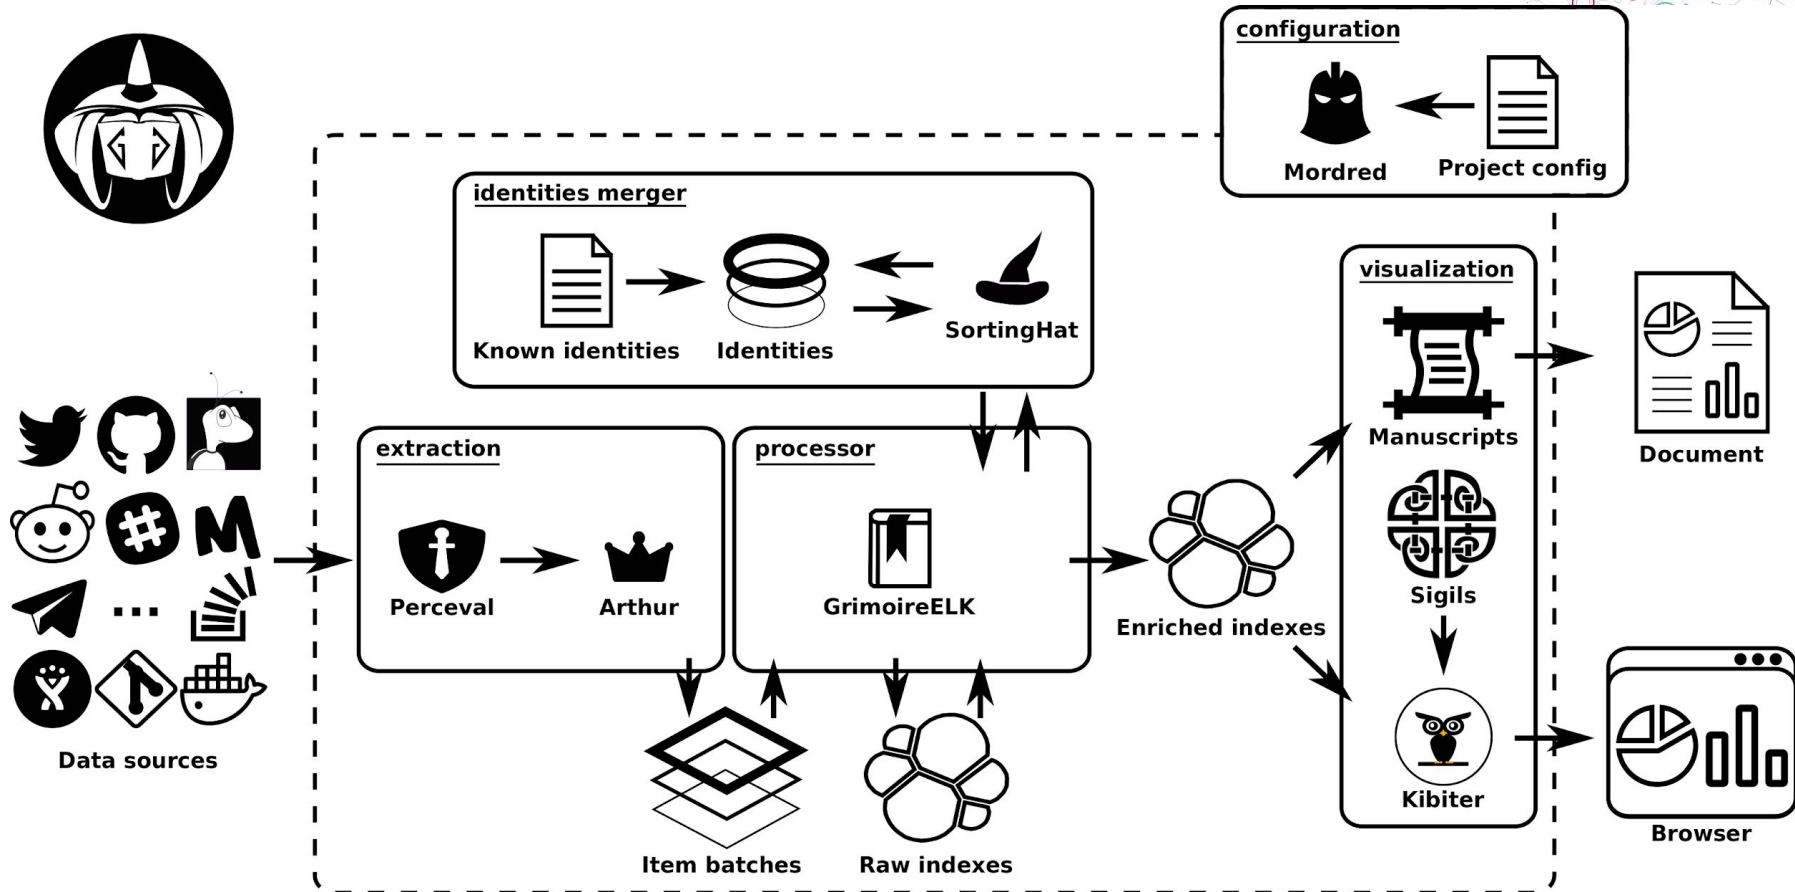

[github]

api-token = XXX

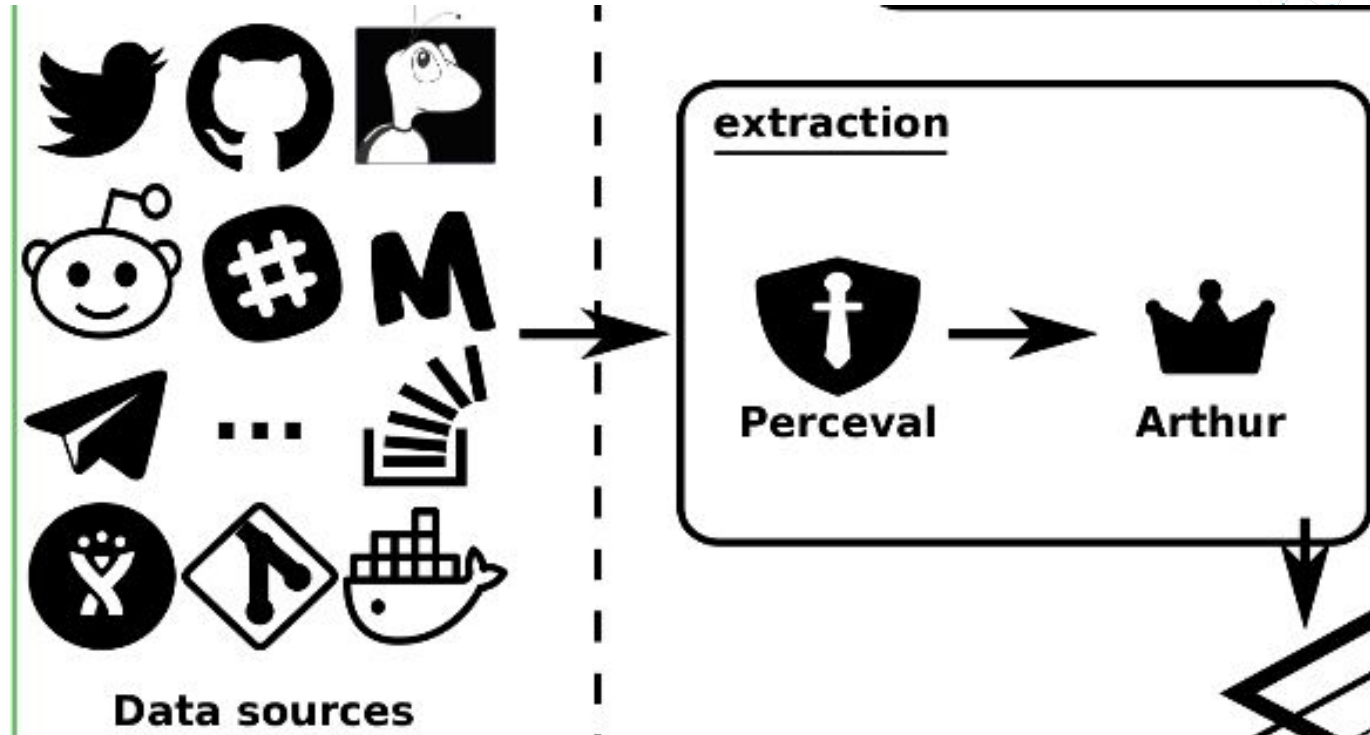

```
docker run -p 5601:5601 -p 9200:9200  
-v $(pwd)/credentials.cfg:/override.cfg  
-t grimoirelab/full
```

GrimoireLab architecture

Architecture: extraction

Example: Perceval

```
(gl) $ pip install perceval
```

```
(gl) $ perceval git https://github.com/grimoirelab/perceval
```

```
(gl) $ perceval github grimoirelab perceval --sleep-for-rate  
-t XXXXX
```

...

Example: Perceval

```
from perceval.backends.core.git import Git
repo_url = 'http://github.com/grimoirelab/perceval'
repo_dir = '/tmp/perceval'

repo = Git(uri=repo_url, gitpath=repo_dir)
for commit in repo.fetch():
    print(commit['data']['commit'])
```

Running Perceval

```
(gl) $ perceval --help
```

```
(gl) $ perceval git https://github.com/grimoirelab/perceval
```

grimoirelab.gitbooks.io/tutorial/content/perceval/git.html

Producing a dashboard

(assumes Elasticsearch at <http://localhost:9200>,
Kibiter at <http://localhost:5601>)

Prepare: mordred.cfg

Prepare: projects.json

Maybe: identities.yaml

Maybe: menu.yaml

(es) mordred -c mordred.cfg

chaoss.github.io/grimoirelab-tutorial/sirmordred/dashboard.html

Using Perceval to compute metrics

- Get items from the data source
- Store them in a data structure
- Compute metrics
- You can also use Pandas, of course

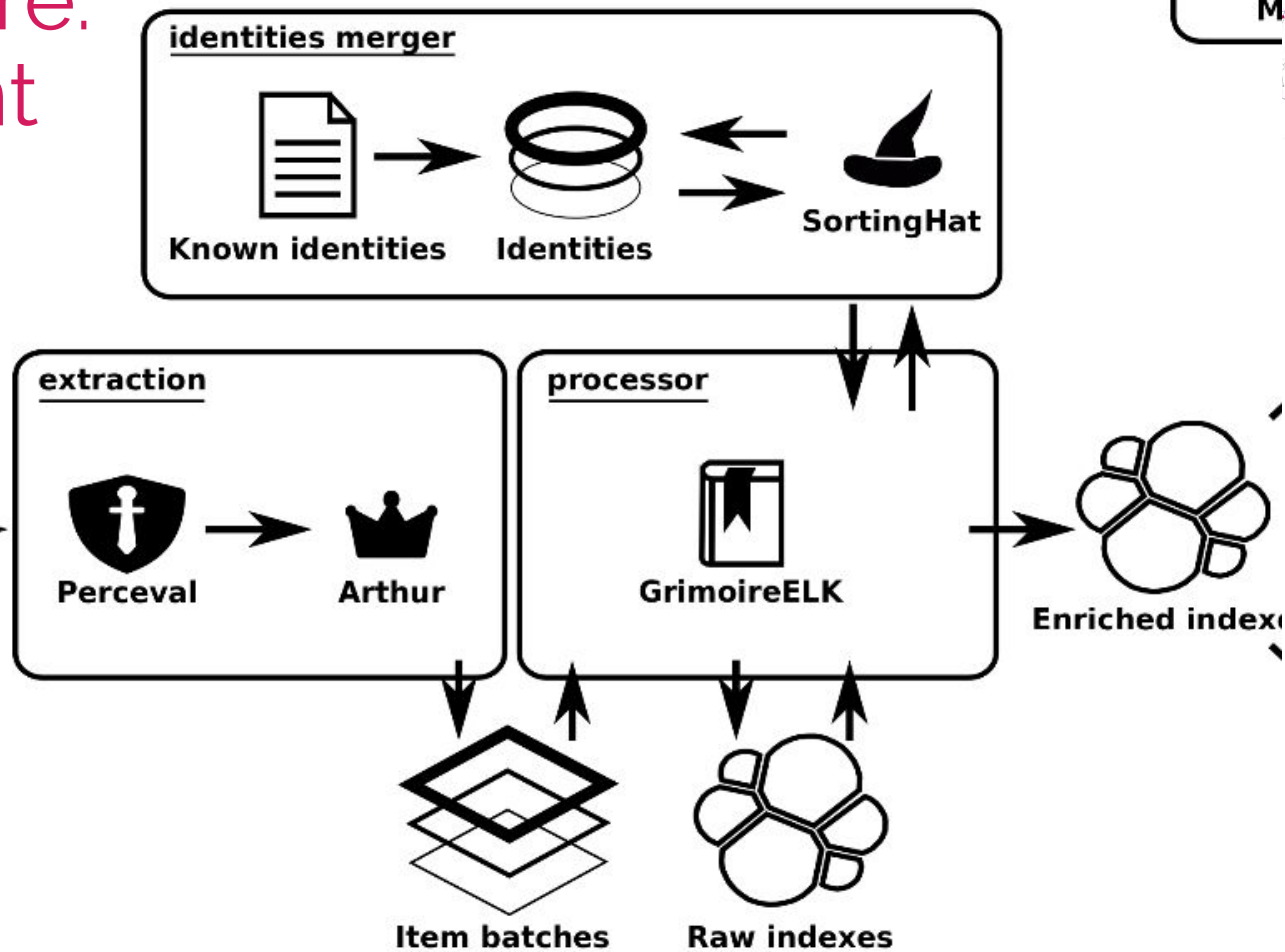

github.com/chaoss/wg-gmd/blob/master/examples/Code_Commits.ipynb

Installing servers from Docker images

```
$ docker run -p 127.0.0.1:9200:9200 \  
-p 127.0.0.1:5601:5601 -p 127.0.0.1:3306:3306 \  
-e RUN_MORDRED="NO" \  
-t grimoirelab/full
```

chaoss.github.io/grimoirelab-tutorial/sirmordred/container.html

Architecture: enrichment

Elk: raw and enriched indexes

```
(gl) $ p2o.py --enrich --index git_raw --index-enrich git \  
-e http://localhost:9200 --no_inc --debug \  
git https://github.com/grimoirelab/perceval
```

(assumes Elasticsearch at <http://localhost:9200>)

chaoss.github.io/grimoirelab-tutorial/gelk/simple.html

Example: item in enriched index

```
{
  "_index": "git_grimoirelab",
  "_type": "items",
  "_id": "34a30200a149354032326ba517d278d7804e8f7e",
  "_version": 167,
  "_score": null,
  "_source": {
    "metadata__enriched_on": "2018-02-03T22:56:57.610440",
    "author_date": "2018-02-02T13:12:10",
    "utc_commit": "2018-02-02T12:12:10",
    "Author_user_name": "",
    "hash_short": "9e6ae8",
    "lines_added": 0,
    "author_id": "75fc28ef4643de5323e89fb26e4e67c97b24f507",
    "project": "grimoire",
    "author_max_date": "2018-02-02T12:12:10.000Z",
    "uuid": "34a30200a149354032326ba517d278d7804e8f7e",
    "Author_id": "75fc28ef4643de5323e89fb26e4e67c97b24f507",
    "message": "Merge branch 'fix-bs4' of 'https://github.com/jgbarah/perceval",
    "metadata__gelk_version": "0.30.23",
    "files": 0,

```

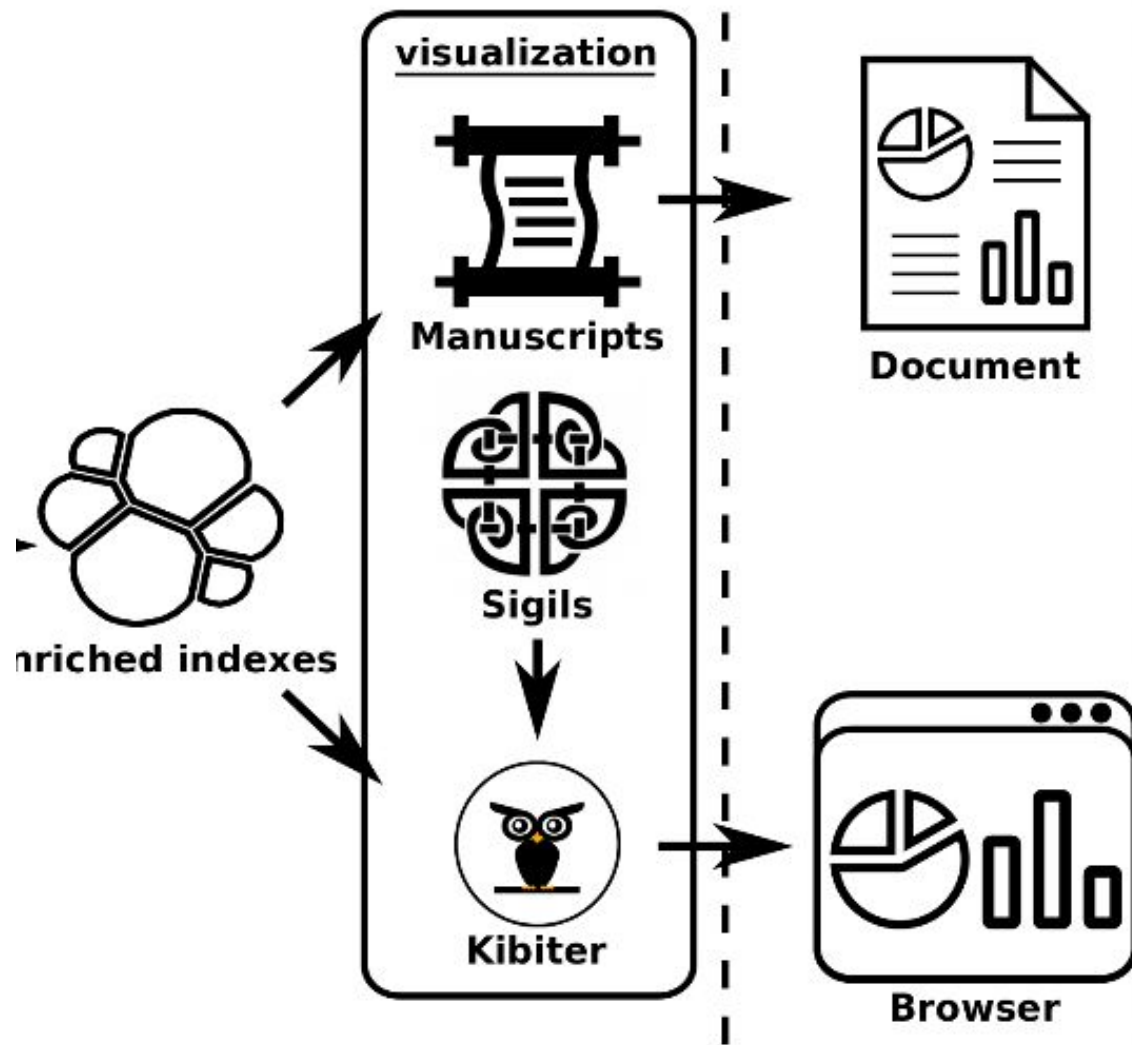

Computing metrics from enriched indexes

- Connect to Elasticsearch indexes
(produced with p2o, mordred)
- Query them to get items of interest
- Compute metrics
- You can also use Pandas, of course

chaoss.github.io/grimoirelab-tutorial/python/indexes.html

Architecture: exploitation

Example: producing a dashboard

```
(es) $ pip install grimoire-mordred
```

```
(es) $ mordred -c mordred.cfg
```

(assumes Elasticsearch at <http://localhost:9200>,
Kibiter at <http://localhost:5601>)

Needs: mordred.cfg, projects.json, identities.yaml, menu.yaml

chaoss.github.io/grimoirelab-tutorial/sirmordred/dashboard.html

Producing a report

(assumes Elasticsearch at <http://localhost:9200>)

```
(es) $ pip install manuscripts
```

```
(es) $ manuscripts -d /tmp/report-result \
```

```
    -u http://localhost:9200 \
```

```
    -n GrimoireLab --data-sources git
```

Try GrimoireLab with a single line!!

credentials.cfg:
[github]
api-token = XXX

```
$ docker run -p 5601:5601  
-v $(pwd)/credentials.cfg:/override.cfg  
-t grimoirelab/full
```

<http://localhost:5601>
